

Reference Letter

Nov. 30, 2016

Dear Professors,

During the course of my thirty years as a teacher I have come into contact with countless students. While some students stand out in the time that I teach them, very few make a lasting impression. Mr. ZHANG Chen, one of my gifted students, is someone who has made such an impression. In spite of the fact that it has been ten years since I have had him as a student, I can still clearly remember his outstanding programming capability and strong self-learning ability.

Recommended by Ms. Zhang Ruizhe, the graduation design advisor of Mr. ZHANG, I got acquainted with him considering my research direction and given some guidance in image drawing and processing with VC++6.0 through MFC structure. Since the instruction of programming language set by our university only involved C language and VB basically, so to help him understand programming technologies better, I recommended some professional books for him in advance. Beyond my expectation, few weeks later, when he went to me to discuss his opinions, I was pleasantly aware that he did produce a thorough understanding to his design mode. Since then, his strong self-learning ability and programming skill had impressed me deeply. And owing to this, his graduation design received a merit finally.

After graduating from our university, Mr. Zhang Chen has worked as a programmer as he expected. Sometimes from Ms. Zhang Ruizhe, I would get some information of Mr. ZHANG and then kept focus on software and mobile games he produced. Seen from his games in recently years, I am convinced that he must be proficient in C language, C++ language and JAVA language, and also the JavaScript. The most impressive one was when I saw his game made by the game engine he designed with C language was surprisingly popular, more importantly, his game system could run fluently even on mobiles with bad UE performance. All these, I think, are a strong prove of his distinguished programming capability and also his original opinion towards programming.

In light of these experiences, I hold a deep esteem for Mr. Zhang's capability in the field of computer science. In this ever-changing era of information, he stands as a strong candidate not only for your institution but also for the rapidly developing world of programming. Endowed with a world-class education from you, he may one day meet this fate. On behalf of his previous teachers, I present my strongest support for his representation and candidacy to your school, especially when I know he great ambition as he has determined to depart the company he founded.

Sincerely yours,
WANG Yujian
Professor
