

**CS4392/5376: Computer Networks/Communication Networks
Summer II 2021**

Homework #2

- Full name only: Chen Zhang
- Release date: June 14th, 2021 (Wednesday)
- Due date: **July 19th, 2021 (Monday) before midnight, 11:59 PM**
- It should be done INDIVIDUALLY; Show ALL your work; Write your answer in a Word file and submit it through the Blackboard
- Total: 10 pts

1. Give traces of the operation of protocol rdt3.0 when data packets and acknowledgement packets are garbled, respectively. Your trace should be similar to that used in the lecture note (e.g., rdt3.0 in Action in lecture note #6). Suppose the protocol has been in operation for some time.

[4 pts]

2. Compare GBN and SR. Assume that the timeout values for all two protocols are sufficiently long such that 5 consecutive data segments and their corresponding ACKs can be received (if not lost in the channel) by the receiving host (Host B) and the sending host (Host A) respectively. Suppose Host A sends 5 data segments to Host B, and the 2nd segment (sent from A) is lost. In the end, all 5 data segments have been correctly received by Host B.

- How many segments has Host A sent in total and what are their sequence numbers in GBN and SR, respectively? Show ALL your work.

[3 pts]

- How many ACKs has Host B sent in total and what are their sequence numbers in GBN and SR, respectively? Show ALL your work.

[3 pts]
